Pollution - Plant tour by Mr. Mc Phee

On March 24, 1970, I conducted a plant tour for Mr. Mc Phee, of the St. Louis Park Pollution Department, and Mr. Tag Tandon, Director of Control Systems of Environmental Research Corporation. Mr. Mc Phee wanted Mr. Tandon to observe our pollution problems, in order that he might recommend to the city of St. Louis Park, what equipment and controls should be installed to control our air pollution. Mr. Tandon's company has been retained to advise St. Louis Park on pollution problems in the city.

My impression is that, if and when Environmental Research Corporation recommends a means of controlling our pollutants, the city will advise us that the means are available to control our pollutants. At this time we will probably discuss and review their recommendations.

Very truly yours,

W. A. Justin
